Sub-03 - Subaudible Tone Decoder

The CircuitWerkes Sub-03 tone decoder is a great way to get the relay closures that you need to automate your network feeds.

- Dry relay closure outputs.
- Decodes 25, 35 & 25/35 combination tones (can be ordered for 50/75Hz, too).
- Combination tones do not activate 25 or 35 outputs.
- Provides a filtered, balanced output minus the tones.
- Accepts either balanced or unbalanced audio input.
- Indicators for all tones, input set, output clipping & power.
- Fully adjustable input & output gain.
- Improved audio design provides higher output levels & increased dynamic range.
- Enable input lets you (or your automation system) prevent unwanted closures.
- Uses standard 1/4" TRS (headphone style) jacks for input & output audio.
- Primary output and power connections are on both screw terminals and Db-9 connectors for easy hookup.

Need to decode subaudible tones for your automation? No problem with the CircuitWerkes Sub-03. You can use the Sub-03 to automate your network feeds or take the guess work out of when to cut away from networks. The decoder listens to your network audio and gives you dry contact closures from any service that sends subaudible tones including satellites, RPU's, ISDN loops and more! The Sub-03's relay contacts interface easily with your automation system. The Sub-03 accepts a wide range of input audio signals and includes a filtered, adjustable, active balanced output for feeding your station. For services using 50 and 75 Hertz tones, the Sub-03 may be ordered set for those frequencies at no additional charge. The Sub-03 is a very reliable and inexpensive problem solver. As with all CircuitWerkes broadcast products, the Sub-03 is covered by our two year warranty.
